

TECHNICAL INFORMATION

Slydring® Wear Rings | Orkot® Slydring® for Piston

Description

Orkot® Slydring® of fabric reinforced composite materials is used in hydraulic cylinders exposed to high loads that can occur e.g. in mobile hydraulics and presses. The high compressive strength, good sliding behaviour and the exceptional wear resistant properties ensure a long service life.

Slydring® of Orkot® fabric composite materials is produced as standard preformed to the intended diameter and ready-to-fit. It is manufactured with an angle cut and already has the necessary gap "Z₁".

Orkot® C380 is a turquoise colored composite material made of a thermosetting polymer, reinforced by a fine plastic mesh and lubricant additives impregnated throughout the material. It is most versatile; suitable for all commonly used

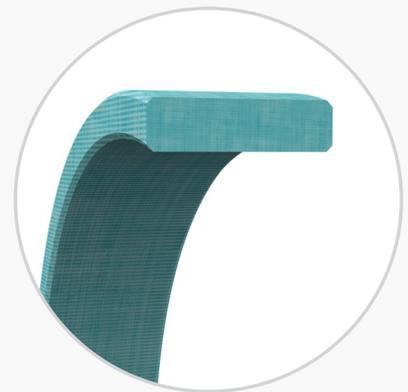

hydraulic fluids such as mineral or synthetic oils, as well as water based fluids. It is an excellent electrical insulator and features enhanced sliding properties in various media.

Orkot® Slydring® is widely used as a bearing element for heavy duty hydraulic equipment:

- Hydraulic actuators
- Mobile hydraulics
- Excavators
- Construction equipment
- Forestry machinery
- Mining
- Steel mills
- Presses
- Water locks
- Marine engineering

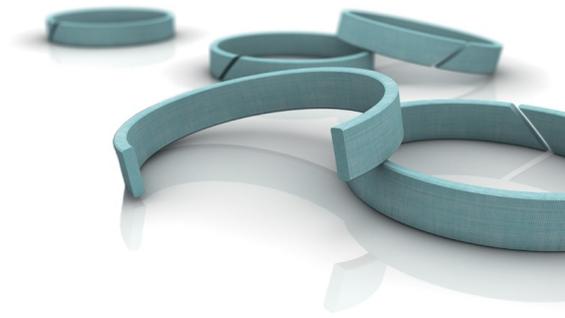

Advantages

- Dimensionally stable and vibration absorbing
- Even distribution of high radial forces
- Good sliding and dry running properties
- High wear resistance
- Good wiping effect
- Long service life

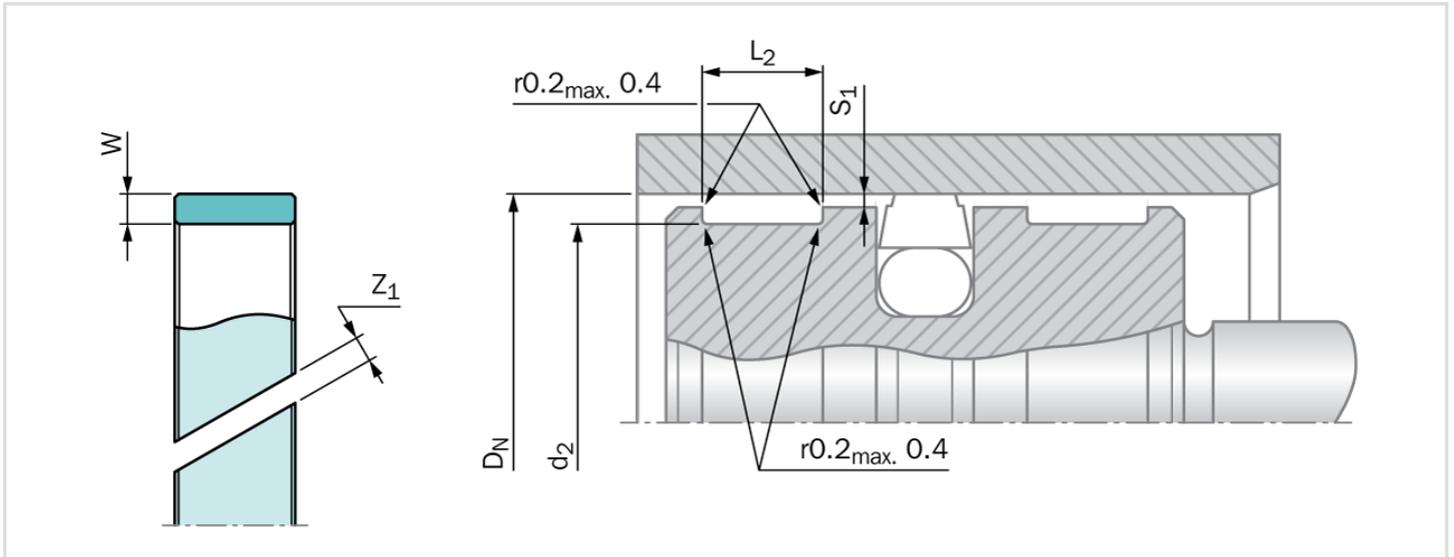

Technical Data

Velocity	:	Up to 1 m/s, with reciprocating movements
Temperature	:	-60 °C to +120 °C
Pressure under dynamic conditions	:	max. 100 N/mm ² at 25 °C max. 50 N/mm ² > 60 °C
