Description

The level temperature regulator, type NR G2" - MA designed for container installation, is a contact less electromagnetic switch serving for continuous teletransmission of liquid levels and temperature.

Via cables of any length, level and temperature can be continuously evaluated for automatic control and display. The level controller contains a resistance measuring chain and a Pt100 resistor.

The level and temperature dependent signal is converted in the integrated measuring transducer into a linear current change of 4-20 mA.

Optionally fixed mounted bistable level contacts can be installed additionally.

The level controller is maintenance-free when nondeposit media are used.

The device must only be installed by specialists.

Max. Viscosity 320mm²/S
