- protection class IP67 / IP68

TP1 transducers employ the NOVOSTRICTIVE touchless magnetostrictive measuring process for direct, precise, and absolute measurement of linear position, for motion control, positioning and measurement display applications.

This measurement principle uses position markers (magnets) as mechanical input devices. The position markers are available in free-floating or rail-guided versions.

Clamps allow easy and flexible transducer mounting, as well as precise adjustment of the installation position.

The transducers are insensitive to dust, humidity, or oils.

The transducers are mechanically very robust and resistant to high shock and vibration. The active sensing element is encased in an aluminum housing rated to IP68. This makes for excellent ingress protection from dust, moisture and oils.

The pulse interface allows a fully tolerated processing of both edges of the Start/Stop signal and an usage of up to 3 position markers.

The TP1 also provides an option for highly-dynamic serial DyMoS®- interface. It offers the advantages of bus-type and conventional interfaces, and also optionally calculates and transmits position marker velocity.

Additional interfaces - see separate data sheet.
