

SRD998 Intelligent Positioner with HART Communication

The intelligent positioner SRD998 is designed to operate pneumatic valve actuators and can be operated from control systems (e.g. the I/A Series System and Evo™), controllers or PC-based configuration and operation tools such as the FDT/DTMs VALcare™. The positioner is available with HART 7 Communication Protocol. The extra large multi-lingual full text graphical-LCD, in conjunction with the rotary selector, allows a comfortable and easy local configuration and operation. For installations in contact with explosive atmospheres certificates are available.

DESIGN

Figure 1. Design

Using the modular concept of the SRD998, the positioner can be optimally adapted to the application. In addition to connection manifolds with various threads, mounting kits for each drive and extensive accessories, these also include integrated pneumatic amplifiers in various performance classes.

Pneumatic Amplifiers

Depending on the actuator, a single or double-acting pneumatic amplifier is used.

- ▶ Codes Bxx - Single Acting
- ▶ Codes Cxx - Double Acting

Single-acting pneumatics have versions B0S, B1S and B2S that differ in air flow. For the double-acting pneumatics, there are the versions C0S, C1S and C3S, which differ in the air performance.

For drives with increased air output, a correspondingly powerful supply air station is required.

TECHNICAL DATA

Supply

Supply air pressure

- ▶ B0S, C0S - 1.4 to 6 bar (20 to 87 psig)
- ▶ B1S, B2S - 1.4 to 10 bar (20 to 145 psig)
- ▶ C1S, C3S - 1.4 to 10 bar (20 to 145 psig)

Output to actuator - 0 to ~100% of supply air pressure (up to 5.5 bar at 6 bar supply air pressure)

Air supply - according to ISO 8573-1

- ▶ Solid particle size and density class 2
- ▶ Oil rate - class 3
- ▶ Pressure dew point 10 K under ambient temperature

We recommend the use of a filter regulator for air supply of the positioner. It reduces the air pressure to the actuator's maximum pressure, keeps it constant, and filters the air. For the pneumatics with standard flow (B0S, B1S, C0S) we recommend the FRS02, FRS03, or FRS923 filter regulator. When using other brands, a filter grade of 30 µm or better is supported.

For the pneumatics with high flow (B2S, C1S, C3S) we recommend the High Flow Filter Regulator FRS04 or FRS05 with a filter grade of 5 µm. When using other brands, a filter grade of 5 µm is supported.

Note for Single/Double Acting Operation

For optimal control performance, we do not recommend the use of double acting positioners onto single acting actuators.

Remote Potentiometer: –Code V, W, Y

The remote potentiometer is used in applications where high temperatures or vibration are present and can result in negative influences to the control. It can also be used in places not easy to reach, to help ensure easier handling of the unit, or for cylinders with large strokes. The positioner SRD998, is mounted far away from the valve or cylinder in a safe environment.

The Potentiometer unit is mounted on the valve or cylinder. The Potentiometer unit can be made by RMU998 or by an external potentiometer.

The external potentiometer unit must support a 3-wire system with approximately 5 kOhm resistance.

If the following requirements are fulfilled, the set up is insensitive to electrical disturbances caused by high electromagnetic fields, EMC, and HF radiation.

Cable length maximum: Model BD 3m (9 ft), AD 10m (32 ft)
Cable Specifications: <ul style="list-style-type: none">▶ 3-wire twisted pair, shielded▶ Shield needs to be connected on both ends to the internal ground▶ Shield endings need to be kept very short when connected to Ground▶ An HF cable gland is not required

For more information about remote mounting, see PSS EVE0118.

NOTE

The functionality and certifications are only ensured with our RMU998.

Electrical Classification ATEX/IECEX

For electrical ATEX/IECEX classification, see “ELECTRICAL CERTIFICATIONS” on page 13.
