

High Pressure Checkball Piston Pumps

Fixed displacement, bi-directional PF6000 Series pumps provide reliable high-pressure operation: Maximum, 15 000 psi (1040 bar).

High Volumetric Efficiency

The positive-seating action of the check valve provides less wear and improved volumetric efficiency at higher pressures.

During operation the checkball rotates, providing a uniform, moving area of wear against the seat. The result is high efficiency even as the checkball wears.

Contamination Tolerant

Checkball pumps use piston check valves to direct flow from the pump inlet to the outlet.

The outlet check valves provide a relatively large flushing path for system contamination. This makes the pumps ideal for environments in which contamination is always present, such as Steel Mill, Mining, and Aggregate operations.

PUMP SELECTION

The table shows specifications for standard pressure and high pressure "H" option models.

These pumps require a complete model code specifying shaft, seal and outlet port options. Refer to *Typical Model Code* on page 6.

Multiple Outlet Models

Split-Flow® models provide multiple outputs for synchronized actuator movement or multiple function circuits. Contact the Dynex Sales department for options and availability.

PF6000 SERIES
14.1 to 29.8 gpm (53,4 to 112,8 L/min) at 1800 rpm
6000 to 15 000 psi (420 to 1040 bar)

Specifications

Pump Models	Output Flow at 1500 rpm ^①		Output Flow at 1800 rpm ^①		Rated Pressure		Maximum Pressure	
	U.S. gpm	L/min	U.S. gpm	L/min	psi	bar	psi	bar
PF6020-10	11.8	44,5	14.1	53,4	6000	420	8000	560
PF6024-10	13.8	52,3	16.6	62,8	6000	420	8000	560
PF6030-10	18.0	68,2	21.6	81,8	6000	420	8000	560
PF6033-10	19.1	72,3	22.9	86,7	6000	420	8000	560
PF6042-10	24.8	94,0	29.8	112,8	6000	420	8000	560
PF6020H-10	11.2	42,3	13.4	50,7	10 000	700	15 000	1040
PF6024H-10	13.3	50,2	15.9	60,2	10 000	700	15 000	1040
PF6030H-10	17.3	65,3	20.7	78,3	10 000	700	15 000	1040
PF6033H-10	18.8	71,0	22.5	85,2	8000	560	10 000	700
PF6042H-10	24.3	92,1	29.2	110,5	8000	560	10 000	700

^① Output flow based on typical performance at rated pressure (ISO 32 oil at 120° F).

INSTALLATION AND OPERATION

Fluid

High-grade premium petroleum-based oil, with a combination of anti-wear, demulsibility, oxidation and foam resistance properties, and rust protection.

Some Dynex pumps are suitable for use with water-glycol, Skydrol and other phosphate ester fluids, and various military fluids. Contact the Dynex Sales department for more information.

If fluid conditions fall outside of the range shown in the *Hydraulic Fluid Viscosity Guidelines* table, or if other operating recommendations are needed, please contact the Dynex Sales department.

Seals

Options include Fluorocarbon (Viton® or Fluorel®), Polyurethane (Disogrin®), or EPR (Ethylene-Propylene Rubber).

Inlet Pressure

Pumps may require pressurized inlet at elevated speeds or fluid viscosities outside the optimum range. Failure to meet inlet requirements will result in flow reduction. Refer to the *Minimum Inlet Conditions* table.

Inlet pressures higher than 10 psi (0,7 bar) require a high pressure shaft seal (XE, XV or XD option).

See *Typical Model Code* on page 6 for selecting seal options.

Outlet Port Options

Full flow and Split-Flow® models are available with the following options:

Standard pressure models have SAE ports. High pressure "H" option models require the use of outlet port option "A" (Autoclave Medium Pressure, Butech M/P or equivalent) or outlet port option "B" (British Standard Pipe Parallel).

As shown on page 3, the outlet port is machined in a block integrally mounted to the pump cover. Refer to *Typical Model Code* on page 6 to specify the port.

Minimum Inlet Conditions^①

Pump Models	Operating Speed					
	1200 rpm		1500 rpm		1800 rpm	
	psi	bar	psi	bar	psi	bar
PF6020, PF6024	0	0	5	0,4	5	0,4
PF6030, PF6033	0	0	5	0,4	10	0,7
PF6042	5	0,4	10	0,7	15 ^②	1 ^②

① Values shown are based on fluid viscosity of 100 SUS (20 cSt). Includes Standard and "H" option models.

② Inlet pressures higher than 10 psi (0,7 bar) require a high-pressure shaft seal (XE, XV or XD option). Refer to "Typical Model Code" on page 6 for seal options.

Hydraulic Fluid Viscosity Guidelines^①

Operating				Start-up ^②		Optimum Range	
Minimum		Maximum					
SUS	cSt	SUS	cSt	SUS	cSt	SUS	cSt
34	2,3	1911	413	1911	413	98 to 324	20 to 70

① If fluid conditions fall outside of the range shown, contact the Dynex Sales department.

② Under load or no-load.

Minimum Filtration Levels

Pump inlet, 150 µ nominal.
Pressure or return line, 25 µ nominal.
Finer filtration levels than these are desirable and will result in longer component life.

Note: Restricting flow to the pump inlet should be avoided to achieve expected output flow.

Orientation

Generally, shaft horizontal with inlet vertically up. Contact the Dynex Sales department for applications requiring vertical shaft-up mounting or inlet orientation other than vertically up.

Bi-Directional Shaft Rotation

With these fixed displacement pumps, the direction of output flow is constant, regardless of drive shaft rotation.

INSTALLATION DRAWING

OUTLET OPTIONS

PUMP OUTLET:
SAE #12 STRAIGHT THREAD
O-RING BOSS
.594/(15,1) TUBE
1.0625-12 UN-2B THREAD

"No Code" Option

PUMP OUTLET:
1 MEDIUM PRESSURE CONED & THREADED
1.00/(25,4) TUBE
1.375-12 UN-2B THREAD
(FITS AUTOCLAVE ENGINEERS SF1000CX,
BUTECH PRESSURE SYSTEMS 1 M/P OR EQUAL)

"A" Option

PUMP OUTLET:
G 3/4
.750-14 BSPP THREAD

"B" Option

INSTALLATION

All dimensions are shown in inches (millimeters in parentheses) and are nominal. See *Typical Model Code* on page 6 for selecting port options.

Contact Dynex Sales for Installation Drawings of Split-Flow® Models.

Pilot/Mounting

SAE E 4-bolt pattern with 0.25 inch (6,4 mm) pilot engagement.

Shaft

1.75 inch (44,44 mm) diameter keyed shaft.

Optional Spline Shaft

SAE Spline, 1.748/1.747 inch (44,39/44,37mm) diameter standard SAE 13 tooth, 8/16 DP 30° involute spline.

Weight (Mass):

290 lb (131,54 kg).

Typical Performance Curves^①

PF6020 Input Power

PF6020 Delivery

PF6024 Input Power

PF6024 Delivery

PF6030 Input Power

PF6030 Delivery

① Curves valid only when minimum inlet condition is met, and for most fluids at 100 SUS (20 cSt). Refer to "Minimum Inlet Conditions" table on page 2.

Typical Performance Curves^①

PF6033 Input Power

PF6033 Delivery

PF6042 Input Power

PF6042 Delivery

① Curves valid only when minimum inlet condition is met, and for most fluids at 100 SUS (20 cSt). Refer to "Minimum Inlet Conditions" table on page 2.

TYPICAL MODEL CODE

PF60		20	H – S	XV	A	–	44	–	10
Pump Type		Design Number							
PF60	Fixed Displacement Checkball Pump								
Output Flow (At 1800 rpm, at Rated Pressure)									
20	Standard: 14.1 gpm (53,4 L/min) “H” option: 13.4 gpm (50,7 L/min)								
24	Standard: 16.6 gpm (62,8 L/min) “H” option: 15.9 gpm (60,2 L/min)								
30	Standard: 21.6 gpm (81,8 L/min) “H” option: 20.7 gpm (78,3 L/min)								
33	Standard: 22.9 gpm (86,7 L/min) “H” option: 22.5 gpm (85,2 L/min)								
42	Standard: 29.8 gpm (112,8 L/min) “H” option: 29.2 gpm (110,5 L/min)								
① Refer to performance curves for flows at other pressures and speeds.									
Operating Pressure									
No Code	Standard Pressure								
H	High Pressure①								
① Requires “A” or “B” port option.									
Drive Shaft									
No Code	Keyed, 1.75 inch (44,44 mm) diameter								
S	SAE Spline, 1.748/1.747 inch (44,39/44,37mm) diameter standard SAE 13-Tooth, 8/16 DP 30° involute Spline.								
Seals①									
XV	All Fluorocarbon (Viton® or Fluorel®) with High Pressure Shaft Seal								
XD	Fluorocarbon (Viton® or Fluorel®) with Polyurethane (Disogrin®) o-rings in the cover and High Pressure Shaft Seal								
XE	All EPR (Ethylene Propylene Rubber) with High Pressure Shaft Seal								
① Note: PF6042 requires 15 psi at 1800 rpm. Seal packages XV, XD, or XE recommended.									

Split-Flow® Options PF6020, 24, 30	
44	Four-piston output + four-piston output
8X	Eight ports, each with one-piston output
4	Four-piston output + four inactive pistons
Split-Flow® Options PF6033, 42	
55	Five-piston output + five-piston output
10X	Ten ports, each with one-piston output
5	Five-piston output + five inactive pistons

Ports	
No Code	Inlet SAE 2-1/2" Code 61 4-Bolt Flange; Outlet No. 12 SAE①
A	Inlet SAE 2-1/2" Code 61 4-Bolt Flange; Outlet 1 Medium Pressure Coned and Threaded②
B	Inlet SAE 2-1/2" Code 61 4-Bolt Flange; Outlet G 3/4 (BSPP)③
① Not recommended for operation above 8000 psi (560 bar). Contact the fitting manufacturer for the pressure rating of the fitting.	
② High pressure port uses medium pressure coned and threaded (Autoclave, Butech, or equivalent).	
③ Outlet port uses British Standard Pipe Parallel fitting. Not recommended for operation above 10 000 psi (700 bar).
